Allin Cornell, Charles Menun, Maziar Motahari, and Nicolas Luco, “Advanced Seismic Assessment Guidelines”, July, 2004. (To be submitted for publication as a PEER report.) Final Project Summary — PEER Lifelines Program Advanced Seismic Assessment Guidelines, applicable to utility buildings, were developed by Stanford University (Bazzurro et al. 2004) as part of the PEER Lifelines Program, Building Vulnerability Studies (Project Task Number 507). The subject project, Task 508, applies these state-of-the-art guidelines in a detailed fashion to two example buildings, each with differing features and functions

within the electric and gas utility network. PACIFIC EARTHQUAKE ENGINEERING RESEARCH CENTER Earthquake Engineering (PEER) Lifelines Program, built on the methods and concepts described above to develop Advanced Seismic Assessment Guidelines (Bazzurro et al. 2004). The Guidelines were developed for the seismic assessment of utility buildings but are applicable to most types of structures. Features of the Guidelines include: Probability-Based Seismic Assessment of Buildings ... University Reliable assessment and effective improvement of seismic performance of structures are two major challenges in earthquake engineering research which need to be addressed properly through detailed investigations and innovative approaches. Advances in Seismic Performance Assessment and Improvement ... Effective seismic evaluation and design require a practical understanding of earthquake motions and structure response. Having investigated the performance of structures during more than thirty earthquakes around the world, WJE engineers have an in-depth understanding of
