on the hard road surfaces. Certain circumstances may call for consideration of wider data application Chapter 4 - Photogrammetry Mobile robots commonly have to traverse rough terrains. One way to find the easiest traversable path is by determining the types of terrains in the environment. The result of this process can be used by the path planning algorithms to find the best traversable path. In this work, we present an approach for terrain classification from aerial images while using a Convolutional Neural Networks at ...
