This concise book shows you how to use Apple's Grand Central Dispatch (GCD) to simplify programming on multicore iOS devices and Mac OS X. Managing your application's resources on more than one core isn't easy, but it's vital. Apps that use only one core in a multicore environment will slow to a crawl. Read Download Concurrent Programming In Mac Os X And Ios ... Both OS X and iOS adopt a more asynchronous approach to the execution of concurrent tasks than is traditionally found in thread-based systems and applications. Rather than creating threads directly, applications need only define specific tasks and then let the system perform them. Introduction - Apple Developer For more information about OpenCL and how you use it, see OpenCL Programming Guide for Mac. When to Use Threads. Although operation queues and dispatch queues are the preferred way to perform tasks concurrently, they are not a panacea. Depending on your application, there may still be times when you need to create custom threads.
