The gravity model of international trade in

international economics is a model that, in its traditional form, predicts bilateral trade flows based on the economic sizes and distance between two units. Research shows that there is "overwhelming evidence that trade tends to fall with distance." The model was first introduced in economics world by Walter Isard in 1954.

Staff Reports - FEDERAL RESERVE BANK of NEW YORK

Human capital is widely regarded in the theoretical literature as fundamental for economic growth. Yet, quantifying the macroeconomic effects of human capital on growth has produced only mixed results. This column introduces a new measure of human capital which exhibits a strong and robust positive correlation with economic growth. The measure is built on recent findings on

Penn World Table | EconData

Penn World Table 9.1 by Robert C. Feenstra, Robert Inklaar and Marcel P. Timmer is provided by the University of Groningen's Growth and Development Centre. It is a database with information on relative levels of income, output, input and productivity, covering 182 countries between 1950 and 2017.

Shang-Jin Wei | Columbia Business School Directory

Liberal international political economy (IPE) is the offspring of a marriage between mainstream international economics with its focus on markets and mainstream international relations with its emphasis on the state. While clearly involving the traditional disciplines of economics and political science, liberal scholarship in IPE tends to be housed almost exclusively in the latter.
