Continue reading Chapter 14 in Jackson . This problem is due Wednesday, April 15, 2009. Consider a particle of charge q moving in a circular trajectory of radius a in the x - y plane: $\mathbf{R}_q(t') = a (\cos(\omega t') \mathbf{x} + \sin(\omega t') \mathbf{y})$. Radiation from this moving particle is observed at a point $\mathbf{r} = r (\sin \theta \cos \phi \mathbf{x} + \sin \theta \sin \phi \mathbf{y} + \cos \theta \mathbf{z})$, PHY 712 Graduate Level Electrodynamics Finish reading Chapter 11 and start Chapter 14 in Jackson . Note: The original problem was not totally well-defined. In order to define the problem,

assume all measurements are taken at $t' = 0$. In the following, assume that there is a particle at the origin in the "prime" frame (x', y', z') and that we want to determine the fields (electric and magnetic) at the point $r' = a' x \dots$
