Systems Concepts and Practices | Coursera An embedded system is an electronic system that are designed to perform a dedicated function within a larger system. Real-time systems are those that can provide guaranteed worst-case response times to critical events, as well as acceptable average-case response times to noncritical events. When a real-time system is designed as an embedded component, it is called a real-time embedded system. Real-Time Embedded Systems | SciTech Connect Real-Time Embedded Systems Concepts and Practices.
